Open Architecture,  
formerly OPEN  
Architecture, is an open  
standard for specifying  
and implementing CAD  
applications. It has been  
adopted by Autodesk.

According to Autodesk,  
Open Architecture  
allows CAD application  
developers to create  
products that  
interoperate with  
Autodesk products and  
use them without having

Referencing Dll from  
Silverlight Application I  
have a silverlight app  
that needs to use a.NET  
dll. The dll is on a server.  
I am able to reference  
the dll from a Windows

---

Forms application using  
a Web

References/Reference  
Assemblies option, but  
I'm not sure how to do  
the same thing from a  
silverlight application. I  
get the error: This

---

project targets the 'Silver  
light, Version=v2.0'  
framework, but is  
referencing 'v4.0'  
projects. Either remove  
the reference to v4.0, or  
change the target  
framework version to

---

v2.0. For more information on this error, [click here](#) to see the Visual Studio documentation on this topic. I tried to install the .NET 4 on the machine, but it didn't

---

work. The client is not going to let us install it. How do I reference a .NET dll from a silverlight application?

A: Silverlight projects don't have the same linking options as

---

WinForms. According to this blog post, you can use a WinForms project to reference the library.

## AutoCAD

Use the keygen to generate a new DWG file. Open Autodesk Autocad and import this new DWG file. Export it from Autodesk Autocad.

---

Rename it to  
"new\_main\_1". Recreate  
your autocad.dwg file as  
a "new\_main\_1.dwg".

3.10 Changes to the  
DGNM Tool Version

3.10 of the DGNM tool  
changes the logic that

---

tells the user if they can continue when there are unsaved changes. The tool does not know whether or not the file has unsaved changes. Rather, the tool assumes that all unsaved changes

---

are lost. Therefore, when the tool closes it will prompt the user for a save at the end of the tool if there are unsaved changes. The following error condition will be changed to produce a

---

more informative message. The tool will no longer present the message, "At least one unsaved change detected", but rather it will say, "At least one unsaved change detected."

---

Please save changes before exiting." On some machines with a large number of unsaved changes, the tool may not be able to completely close in a reasonable time period. In this case,

---

the user will be prompted again after 15 minutes have elapsed. The tool will now save the file, but not close the file. This means that any unsaved changes are saved. With any file that

---

has any unsaved changes, the error condition, "At least one unsaved change detected", will now produce the message, "At least one unsaved change detected. Please save changes before

---

exiting." Additionally, the tool will now log the user out if any unsaved changes are detected, but the tool is not able to save the file. This occurs when the tool cannot save the file in a

---

reasonable amount of time and the user attempts to exit. See Also 3.10.1 Changes to the DWG Tool Version 3.10.1 of the DWG tool adds a new command that allows you to select

---

an area of the file (if this is supported by your DWG tool) in order to save it. The command is :SaveSelected. This
