To install, scan the unpacked archive and install it on a freshly started computer. After that, too many system updates may affect system performance. Updates in this case will be marked as hidden. The installer will notify you of this. ***Please note that in some builds, the uninstaller utilities are built into the code of the software package itself. After removing the patch, the warning program is not worth it. ***Completing the installation image requires about 200MB of disk space. ***When working with NGA, it is recommended to run the installer with administrator rights (root). Press F7 to run. This will perform the necessary checks, after which you can begin the installation. Once the installation process is complete, run uninstal.exe and then uninstkustem.ex. Attention! Along with the Adobe Flash Player driver, you need to uninstall the graphics driver. It will only work in EXE format in a â€œlocalâ€ directory.
