The AutoCAD Concept If you are a designer, user, or software developer in this field, you may have come across a similar, if not the same, experience as I had. As a researcher in my last job, I was asked to be part of a team to help build an AutoCAD model. I was given a few hours to just browse through the functions available and get familiar with the product, get an understanding of its architecture and the main points it offers. When I logged into the system, the first thing I saw was the main menu. The Classic Menu Let's take a closer look at that menu. When you open AutoCAD, you are greeted with a classic-looking menu that looks like this. This menu is useful as a quick navigation hub. You can start your modeling session, open an existing drawing, manage an object, or run any of the thousands of functions AutoCAD offers. The classic menu is divided into the following sections: File Windows Preferences Help Modeling Ribbon When you click File, you get a list of your drawings. You can filter the list by drawing types, date ranges, names, and so on. Click Windows to access the windows in your drawing. You can then sort or filter the windows based on whatever criteria you need. You can also open various editing windows, such as the Ribbon, Reference Manager, or Database Manager. Preferences is where you can adjust various settings for AutoCAD, including colors, fonts, and the Ribbon settings. Help is where you can access the online help. Modeling is where you can start modeling or run a command that is not an editor. When you click Ribbon, you are able to use the Ribbon to work with objects. Clicking an item in the Ribbon opens a window where you can select objects and start editing them. The Ribbon The Ribbon is the graphical representation of the main workspace in AutoCAD. It is divided into the following sections: Home Communities Ribbon Assets Modeling Ribbon toolbars Each section contains a list of tools. For example, you can have a drawing, annotation tools, sketchpad, and so on. If you hover over the top-right corner of the tool,

What up? "; with this string: var string2 = "INTRO: Hello there! What up? "; I have tried following: string1 = Regex.Replace(string1, "[INTRO]", "INTRO:"); But with this it gives me following output: INTRO: Hello there! What up? "[INTRO] Why hello there! What up? " Please help. A: You can use a negative lookahead here: string1 = Regex.Replace(string1, @"[^[^\]]*\]", "INTRO:"); The negative lookahead will make sure that the] is not at the end of the string. I would also add that it's a good idea to use string.Trim() to remove whitespace that may have been added from your original string, it'll clean up any unnecessary whitespace and make your life easier later.
