[Paperback] The Filmmaker's Guide to Visual Effects: The Art and Techniques of VFX for Directors, Producers, Editors and Cinematographers ISBN: 0-470-52533-5 Lan: english Desc: A visual guide to understanding and creating visual effects for film, television, video games, or any other industry that shoots The Filmmaker's Guide to Visual Effects: The Art and Techniques of VFX for Directors, Producers, Editors and Cinematographers And some video tips (even if they are not really advice, because I'm a beginner myself) : [youtube]Y7gUgp3pcck[/youtube] thanks for the link to the intro movie! Very happy I don't have to read it all :) yes, the opening is a little too compressed, but this is the way it was shot and there's no way to tell if it was done by film or digital, as it had some visual effects. If they are done by film, and it's a big crowd scene, then it's not that bad, but on the other hand, you'd think they would have shot it all by a big screen, so it's not that good for the story. I'd like to see a digital cinema camera because it's the only one that has larger pixels, and even if it's not as good as film, it should be better for the price.

[iDGi]Yeah, I realized that after I posted. I just used a digital stick, since a lot of people ask me about the cinematography and lighting. I used to take it to film festivals, but I didn't really enjoy it (and used to bring it back as well). I shot digitally for a while, but now I really enjoy working on film. It's still my first preference. [iDGi]Yeah, I realized that after I posted. I just used a digital stick, since a lot of people ask me about the cinematography and lighting. I used to take it to film festivals, but I didn't really enjoy it (and used to bring it back as well). I shot digitally for a while, but now I really enjoy working on film. It's still my first preference. A digital camera does really good things to the picture quality! But I think you should get more of a grip on the situation before you try to use a digital camera
