What's new:

Unknowable Demon Eyes Horde of Giants Just like the other creatures, it hovers around, waiting for an opportunity to attack. But, the giant has a visual rarity. Its eyes are different from others. While other creatures have similarities from the original species, the giant's eyes are different and strange. Not a single one, but four giant birds. Left, right, above, and below. From different angles, it's a completely different creature. Sword Mastery? After completing the new strategy quest The Cult of War, you can choose the top guild, The Familiars of War, and fight one of the two Guilds that are affiliated with the second party. Wanting to get his hands on the swords and become "the best", the top level swordmaster starts to strongly argue with the other high level swordmaster. The fight was getting more and more heated. The high level swordmaster loudly shouted, "The Master Sword II!" You can only use the sword and have a chance to receive additional skills. When you enter the new strategy quest "The Cult of War" from the Guild Practice mode, after using the Quest-Exchange, you'll receive a quest to fight one of the two guilds that belongs to the second party. "Swordmaster 1: 'Before you, I say! The Sword II is not more powerful than my Sword Master! Don't get your hopes up! The Sword Master II!'" "Swordmaster 2: 'Stop talking crap! Let's fight! I'll win! I have one already! I beat you with my Sword Master once!'" Both the swordmasters were shouting at each other. Their voices were almost deafening. "Swordmaster 1: 'Even if I say it's not true, it's not a lie!'" "Swordmaster 2: 'How can it be a lie? It's true, we just feel it!" "Swordmaster 1: 'Are you really serious? Your Sword II is unstable. You say that an Axe is strong in your hands? Come out and fight me! Let's not just listen to all these lies!

For example: git remote set-url origin git remote set-url origin Then you can use GitLab for pushing your commits to that repository, but you can still use your local computer to work on your own branches (unless you have another repository configured on your local computer).
