SCREENSHOTS BOSS REPORT BOSS REPORT IN THE NEWS "We were delighted with the amount of positive feedback from our players when the game was released," the Power Supplied development team writes on its Facebook page, "it gave us even more of an incentive to keep working on it and hopefully it's worth waiting for!" The release in December of last year was the third time Power Supplied has been released into the wild. The previous two were unsuccessful and closed the game down for updates until the game actually saw the light of day. "We actually always wanted to release it because of this," the development team writes, "we felt it was important to get it right so we took the time and tried to make it as good as possible, and that really showed in the final result." And I'm sure it really showed when people got hold of the game for the first time. The release of Power Supplied was also accompanied by the official launch of the game's website, which you can now use to discuss Power Supplied with the developers and the community. Power Supplied will also get its own Community Hub on Game Centre, as well as on Google Play and on the App Store, which means you'll be able to share your custom maps or new character designs, and that you'll have the option of importing your save files from previous versions to continue where you left off. Do I Need to Pay for Power Supplied? No, but there are a couple of ways you can acquire Power Supplied that may help you. Power Supplied is currently free for the first 500 downloads, after which it will cost $3.99 and is available for the iPad and the iPhone. What's new in Power Supplied:

by: 3x 18650 sized batteries (Sold Separately) Dimensions: While McKillop doesn't reveal specific details about the system just yet, a brief gameplay demo is now live and acts as a nice teaser for fans of the series on what to expect when Firewatch hits PC, Mac and Linux on June 9. Firewatch is a narrative-driven game where you take on roles of a park rangers from the National Park Service who's sent to a remote area of the state of Washington to investigate a fire in a nature reserve. Your job not only involves fighting the fire along with a ghostly hot-blooded companion, it also involves solving puzzles, chewing the scenery with the freewheeling comedy of a classic noir thriller. The demo features Edward Lambert, a seasoned park ranger in his seventies ready to retire for good. You can watch Lambert as he performs his duties in the forest by tackling various puzzles and solving the mystery behind the fire. Each puzzle is mechanically designed to push the player into a specific action but usually creates situations where the player must think outside the box by improvising to fulfill the conditions of the puzzle set by Lambert. While the story of the game is a loose interpretation of what really happened at Camp Branchwater during the summer of 2016, McKillop described the fictional recreation of the story as "very faithful". He explained that the team behind the game tried their best to get the game "as close as we could to being a true depiction of what went down based on a lot of research", including field trips to the location and a trip to visit the Ranger John Muir House on California's Big Sur coast. Patrolling the landscape of Camp Branchwater across roads, canals, trails and murky thickets, players traverse the largest park in the United States. Players have the ability to interact with various other people and objects and, of course, the ecology of the forest - you can even lure a bear out of hibernation. Firewatch will have plenty of somber moments and plenty of comedic moments. What's more important is the player's level of immersion within the world of Camp Branchwater. Meander through it as you wish - even if it's no more than

exploring a few corners - and remain undetected in the sunny summer days of the woods. This demo is also the first chance we were given to experience the game engine, Firewatch's in-game engine "Monochrome", that relies on
