When it was first introduced in 1982, AutoCAD was a revolution in the computer-aided design (CAD) market. It was designed to take advantage of the advances in graphics hardware, while still being simple enough to learn and use. Unlike previous CAD programs, it did not use a mouse-driven mouse tool interface, but instead used a keyboard and plotter-based interface that gave the user the ability to draw shapes interactively with the mouse. The program's

name comes from the acronym "AutoCAD", an abbreviation of the original program's name: "Automatic Computer-Aided Design." Since its release in 1982, AutoCAD has evolved to become one of the most popular commercial desktop CAD applications, with over one million units sold to date. Today, AutoCAD is the market leader in both commercial CAD and desktop GIS applications, and the most widely used CAD application in the world. [1] History AutoCAD evolved from two earlier programs,

PaperCAD and TurboCAD. PaperCAD was developed at Thomas Wolf Visual Technology, Inc. in 1977 and was designed to facilitate drafting and editing of engineering-oriented publications. TurboCAD was developed at Turbo Design, Inc. in 1976 and it was an early general-purpose computer graphics package for the Apple II and Macintosh computers. Turbo Design had a partnership with Rainbird, Inc. in 1980, and in 1981, several members of Turbo Design's Computer Graphics Technology group formed a new

company to produce an Apple II graphics program called AutoGraphics. Although AutoGraphics was marketed as a "graphics package" for the Apple II, it was a very early 3D application with true 3D drawing capabilities. The program included both vector and bitmap graphics modes, so a user could select between the two for each drawing operation. These features made the program ideal for engineering and architectural drawings. AutoGraphics never got off the ground, and the founders went on

to other projects. In 1981, Dave Larabell joined Thomas Wolf as an Apple II programmer. Wolf approached Larabell about developing a faster and more powerful graphics application, and in 1983, Wolf brought him on as the technical director of AutoGraphics. Larabell in turn brought in Frank Rudy to help out on the programming side. Rudy was very familiar with the AutoGraphics user interface, having previously worked for Turbo Design on their development of AutoGraphics.

Rudy's involvement gave AutoGraphics a significantly improved

Applications which are not built by AutoCAD's developer, but rather developed by third parties, or may be completely free, and have a graphical user interface built on top of ObjectARX's classes, should be able to be loaded in to AutoCAD as add-ons, using the Autodesk Exchange server. This server is also used to store AutoCAD add-on applications from

third parties, which can be downloaded by AutoCAD users. The ObjectARX API ObjectARX, the AutoCAD ObjectARX API, is based on the Microsoft Common Object Model (COM) and can be accessed by AutoCAD (and similar products) from.NET or from VBA. ObjectARX is an OLE Automation and Component Object Model (COM) Component based API. AutoCAD, as of version 2013, has built-in OLE Automation support. AutoCAD's OLE support has been enhanced in Autodesk Application Exchange 2015. ObjectARX can

be used to automate AutoCAD functions, that is, to automate the AutoCAD environment. In AutoCAD 2013, the ObjectARX API was used to automate the Start, Application, User Interface, Preferences and Options panes of the application. ObjectARX can be used to automate AutoCAD from VBA, as well as to allow AutoCAD to be used from VBA and.NET and many third party applications. The ObjectARX API supports most of the commands, options and features of AutoCAD, and other functions. ObjectARX is a COM

API. However, if you require more than basic functionality, you can access the ObjectARX API via the ObjectARX ActiveX control or C++ and COM API. The ObjectARX API consists of the following layers: The core layer: The core contains the high-level functionality. This functionality is independent of any particular programming environment or any particular language. The ObjectARX COM layer: Objects using the ObjectARX API use a COM component. The OLE Automation layer: The OLE

Automation layer is used to transfer information into and out of AutoCAD. The Client layer: The Client layer provides a uniform interface for all communication with AutoCAD. AutoCAD users can set macros in the ObjectARX API to automate repetitive tasks. AutoCAD also contains a macro af5dca3d97

Create and import markup on a PDF by filling out an interactive form on the PDF. To use this feature, the PDF must be loaded

into a drawing. (video: 2:06 min.) Markup Assist: Create markup in the new Placeholder tool window. Automatically add geometry to a drawing based on a template. (video: 1:12 min.) CADScript Compiler: Streamline your CADScript workflow. Let the Compiler generate relevant CADScript code for you. Automatically generate functions to open and close tabs, save open dialog boxes, and clean up your workspace. (video: 1:53 min.) Conditional Block Commands: Add commands to a command palette

or command bar only if a condition is met. (video: 1:45 min.) Schedule Support: Set up AutoCAD for working on your PC with full support for the Windows 10 timeline. By using the new timeline, you can make changes without needing to restart your computer. (video: 1:09 min.) Symbol Library: Improve the way you manage and access your symbols. Use new searching, filtering, and tagging features to find symbols quickly. (video: 1:49 min.) Assistive Technology: A new design manager will provide a

more efficient and accessible way to manage AutoCAD's settings and add-ons. The new design manager will also enhance existing features of the AutoCAD Productivity Center, such as the UI Guide, help pages, and help files. (video: 1:38 min.) Project/CAD Sync: Automatically synchronize your AutoCAD drawings with a cloud-based repository. Now you can collaborate with other team members, access multiple CAD drawings simultaneously, and start working on your drawing while the cloud-based repository is still

syncing. (video: 1:35 min.) Enhanced Printing: A new dialog box allows you to export layers in a PDF document to a Microsoft Excel spreadsheet. This is useful for creating reports or exporting layers to a spreadsheet. (video: 1:27 min.)
