Truex is still racing, but he says he can pass the time by working on his truck with the speed. He made one public appearance. Check out the video to see how it works and where. Download "Deeper" by TechnoTrend here.rar 1.0. September 14, 2006 This page has been marked as archived from the original version.

The mouse primordial germ cell migration. The germ cell lineage is a unique group of cells that arise during embryogenesis and are destined to remain sequestered in the gonadal ridges. These germ cells are the precursors of male and female gametes. They develop by conserving a unique capacity to migrate in a specific direction between the extra-embryonic mesoderm and the notochord. The molecular mechanisms governing the development of this migratory phenomenon have been extensively studied. This review highlights the recent advances made to understand the molecular mechanisms that govern the migration of primordial germ cells and the role that several components of this phenomenon play in the development of the germ cell lineage.[Biomechanical evaluation of the effectiveness of the Protexturo® technique for the treatment of scoliosis]. The objective of this study was to evaluate the effectiveness of the Protexturo® technique in the treatment of AIS using a biomechanical model. The authors evaluated the effectiveness of the Protexturo® technique using a transverse isotropic model. Twenty AIS patients who underwent the Protexturo® technique and 18 AIS patients who underwent conventional nonsurgical treatment were evaluated. In all patients, surgical treatment took place after the diagnosis of an AIS and an indication for surgery was made by an orthopaedic surgeon. The objective evaluation was performed by one orthopaedic surgeon, experienced in orthopaedic surgery, using a stereophotogrammetric system. The data obtained during surgery were used for statistical analysis. The mean value for the Cobb angle in the nonsurgical group was $50.8^{\circ} \pm 5.1^{\circ}$, whereas, in the Protexturo® group, it was $34.8^{\circ} \pm 5.0^{\circ}$ (p c6a93da74d
